DETAILED ACTION

Priority

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Allowable Subject Matter

Claims 1-5 are allowable over the prior art of record.

The following is an examiner's statement of reasons for allowance: Although, Dufour (US PAT No. 5,717,347) teaches a logic circuit of the emitter-coupled type operating at a low voltage, one of ordinary skill in the art would not have been motivated to modify the teaching of Dufour to further include, among other things, the specifics of first in series transistors having a third bipolar junction transistor and a first field effect transistor, where the third bipolar junction transistor has a collector connected to a collector of the first bipolar junction transistor, a base for receiving a reload signal, and an emitter connected to a drain of the first field effect transistor, while the first field effect transistor has a source, connected to the current source, and a gate for receiving the reload data; an inverter for inverting the reload data; and second in series transistors having a fourth bipolar junction transistor and a second field effect transistor, where the fourth bipolar junction transistor has a collector connected to a collector of the second bipolar junction transistor, a base for receiving the reload signal, and an emitter connected to a drain of the second field effect transistor, while the second field effect transistor has a source connected to the current source, and a gate for receiving output data from the inverter, as set forth in the claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Bushey et al. (US PAT No. 4,806,796) discloses an active load for emitter coupled logic gate.

Tran (US PAT No. 4,991,141) discloses a sense amplifier used with memory.
